Farm Characteristics

| | |
|-------------------|--------------|
| Type of animal | Dairy cows |
| SOP products used | SOP STAR COW |

Mr. Mangiavini told us,

"We have been using the product SOP STAR COW for more than a year. The bedding you can see in the video was activated in April 2019.

In the summer, the bedding has never been a problem. With the product, it has remained dry and hasn't given any problems regarding animal health even though we only added straw once every 15/20 days.

In winter, due to the weather conditions, the bedding was damper and the animals' hooves began to sink into it, but without causing any great problems and, above all, maintaining high animal health. Straw was added more frequently, almost once a week.

When the weather got better, the bedding went back to being dry and compact as you can see in the video, the animals no longer sank into it and we went back to adding straw just once every 15 days again.

In the video you can see how difficult it is to dig into the bedding due to its compactness and dryness, it doesn't even dirty your hands.

An important factor that cannot be perceived from the video is that there is absolutely no smell of ammonia, even if the bedding is 1 year old."
